

Perimeter insulation under the floor slab

TECHNOpor glass foam granulate is an environmentally safe insulation material made from pure glass.

PERIMETER 50 is particularly suitable for perimeter insulation under and flanking the floor slab – an area you will never be able to access again. Glass foam granulate facilitates a thermal bridge free construction.

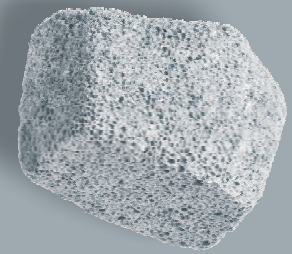

TECHNOpor glass foam granulate counteracts the weak points of traditional building insulation with simple methods and has proven to be very effective.

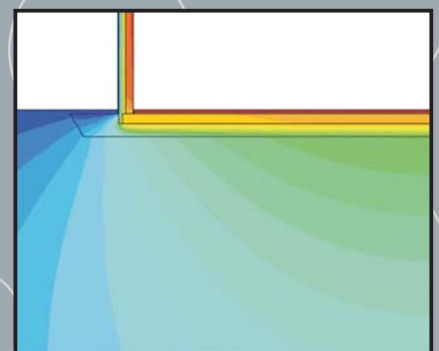

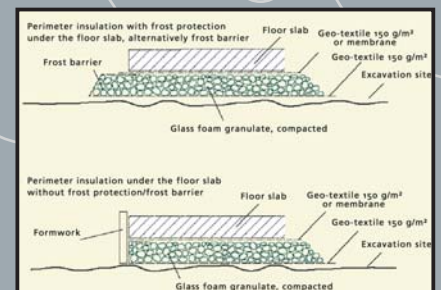

Convincing features:

- Robust, inherently stable, frost proof
- Excellent load bearing capabilities, app. 50 t/m²
- Insulating, provides drainage, capillary breaking
- Low bulk weight of only 170 kg/m³
- Odourless and non-toxic by nature
- Non-flammable (Euro Category A1)

Errors and typing errors excepted. Last updated in April 2009.
